[Report] 2025 Investment and Financing Situation

📌 **Three characteristics of investment and financing in 2025:**

- Money is "moving forward", but scale is "concentrating" --> opportunities are in the early stage, but only a very small number of projects can truly grow large.
- State-owned assets and industrial capital have become the dominant forces. The logic of this type of capital is no longer to maximize financial returns, but rather industrial synergy, domestic substitution, and systematic capabilities.
- US dollar capital has shifted to a supplementary role in providing globalization and early-stage value discovery.

AI: Where is the money mainly invested?

- ToB is the main battlefield. More than 60% of AI funding is directed towards ToB scenarios such as embodied, industrial, medical, autonomous driving, and data governance.
- The amount and number of financings in embodied intelligence have grown significantly.
- Two scenarios that dropped out of the Top 10 in total financing amount:**Marketing and Consumption**
- Two new scenarios entering the Top 10:**New drug R&D/Synthetic Biology and Scientific Research**

Differences between Chinese and US AI

- US: AI Platform and Rule-Making Power
- China: AI Engineering and Industrial Systems, with few mega rounds
- More than 40% of US funds are invested in large models; Chinese funds are concentrated in robotics, autonomous driving, and AI + manufacturing.
- 75 new AI unicorns will emerge globally in 2025, with the US accounting for an absolute majority; Chinese unicorns are mostly in hardware / systems / automation, rarely pure software or model platforms

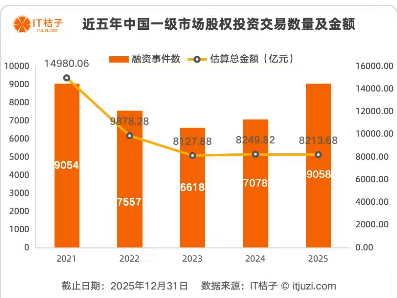
Statistical Data of the Chinese Market

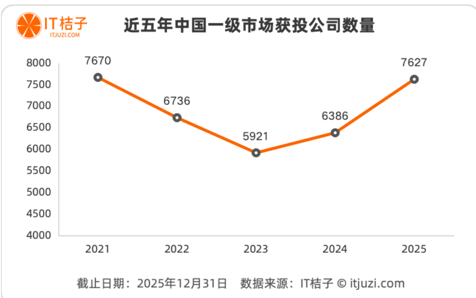
Source: IT Juzi, statistics as of December 31, 2025

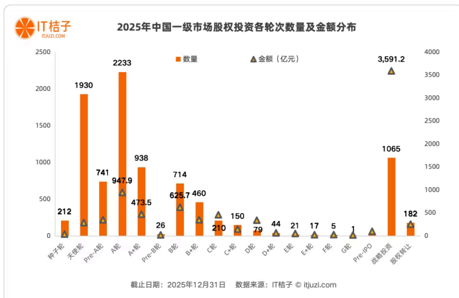
Overall situation of the primary investment and financing market in 2025

Overall warming, more diversified and rational investment, with more funds flowing to early-stage projects that require relatively less capital.

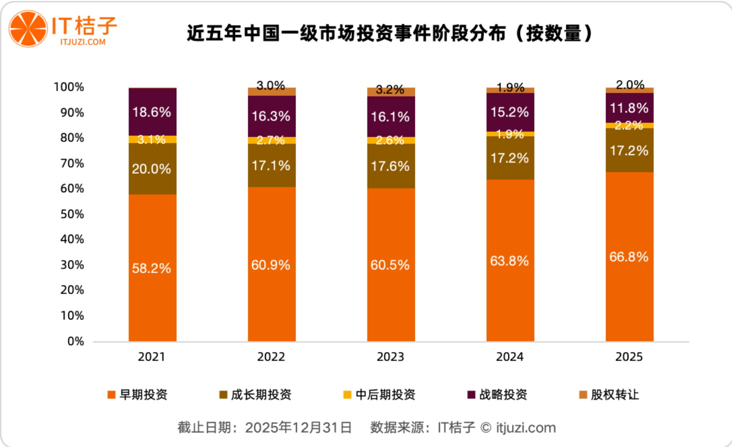
- **Number of Transactions:** A total of 9,058 equity stake investment transactions occurred in the primary market, representing a year-on-year increase of 28%, making it the most active year in terms of transactions in the past five years.
- **Total investment amount:**Basically on par with 2024, the total scale of funds in the market remains stable.
- **Number of invested enterprises:**7,627, with a year-on-year increase of 19.4%, and market coverage has significantly expanded.
- **Early-stage investments (seed, angel, Series A)** reached 6,054 events, accounting for **66.8%** of the total market, hitting a new high in the past five years.
    - The proportion of growth-stage investment plummeted from 32.6% in 2021 to 19.6% in 2025; the proportion of mid-to-late stage investment even halved from 16.3% to 7.9%.
- Thousands of early-stage companies **that accounted for 66.8% of the market's transaction volume** collectively received **approximately 25% of the market's funds** in 2025.

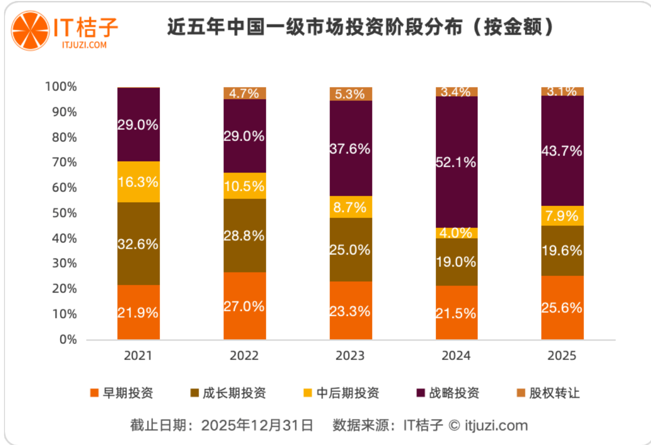






https://mp.weixin.qq.com/s/6yWvf1rpX3E_-FjW6_H3kA





https://mp.weixin.qq.com/s/-3jYPq7o5-ChxsGhLpXGFg

Strategic investment dominates in terms of capital volume. Its proportion of the total amount soared from 29% in 2021 to 52.1% in 2024, and although it declined in 2025, it still accounted for 43.7%, maintaining absolute dominance. In 2025, strategic investment, with only 11.76% of the transaction volume (1,065 transactions), attracted as much as 359.122 billion yuan in funds. Behind this is the rise of state-owned capital and industrial capital, whose investment logic is no longer the financial returns of traditional VCs, but rather the "from 10 to 100" layout serving industrial integration and national strategies, with funds flowing precisely to a small number of leading enterprises that meet strategic requirements.

Investment and financing amount allocation

- Less than 5% of leading companies absorb more than half of the market funds, while more than three-quarters of companies can only compete for less than one-sixth of the funds.
- All 5 companies with total financing exceeding 10 billion yuan in 2025 are all companies related to central state-owned enterprises and local state-owned enterprises.
    - Among the 20 central and state-owned enterprise-related companies with the highest total financing amount, manufacturing enterprises account for half of the total, including State Grid Xinyuan, Magang Co., Ltd., Shenneng Environmental Protection, Inner Mongolia CGN, Jinchuan Nickel and Cobalt, Wanxin Integrated, etc. Most of these enterprises align with national strategic directions and focus on key areas such as hard technology and energy.

Investment Entities: State-owned assets are no longer supplementary forces in the market, but rather dominant participants.

- The penetration rate of state-owned background institutions in the primary market has steadily climbed from 35.46% in 2021 to 44.55% in 2025.

> State-owned background institutions: Investment institutions directly or indirectly controlled by government departments, state-owned enterprises/central enterprises, public institutions, or other state-owned capital. The first category is government-guided funds, and the second

> category is state-owned enterprise/central enterprise investment platforms (investment platforms managed by private teams, but those with state-owned capital participating as LPs (Limited Partners) in the funds they manage are not included).

- There were 225 US dollar investment events, accounting for only 2.5%, with the annual US dollar financing amount being only 82.7 billion yuan, and the market share dropping to 10.1%.
    - Transform from the protagonist at the poker table to a supporting role providing special value: Globalization enabler, early value discoverer of small and beautiful

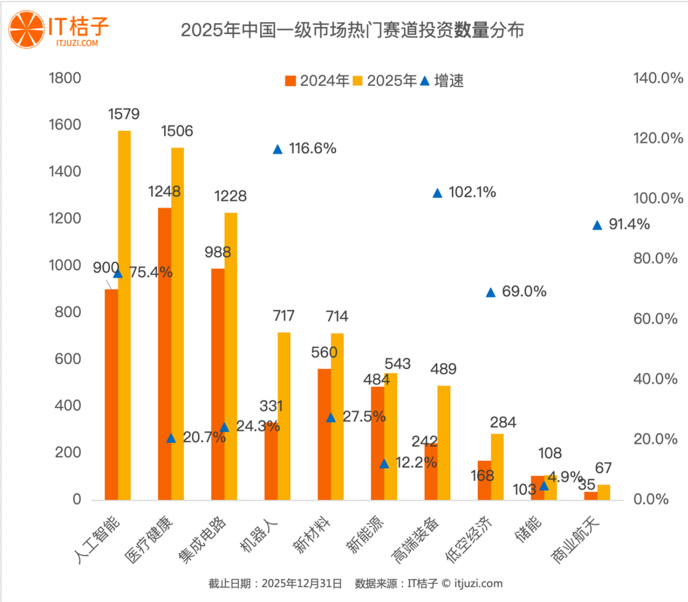
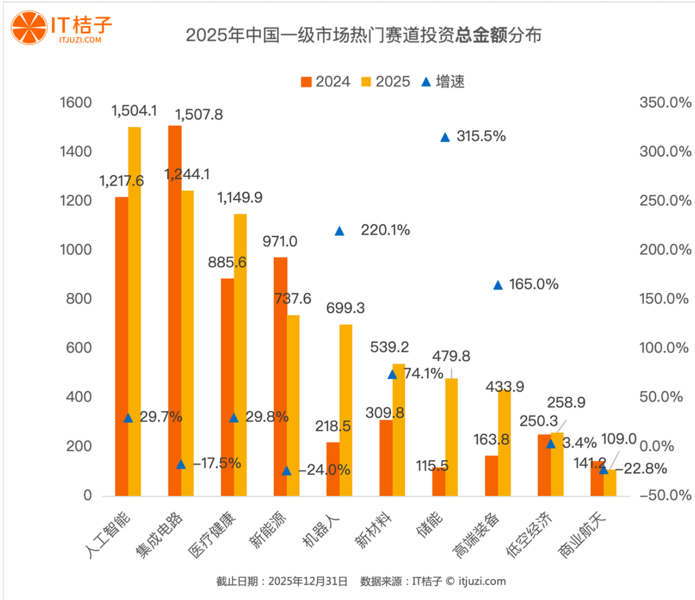
https://mp.weixin.qq.com/s/y0g6UpQJI1XTDbsOzxw7Tw

Investment and financing situation by sector

- AI, healthcare, and integrated circuits lead in both the number and amount of financing events; robotics and high-end equipment lead in the growth rate of financing number and amount
- The most active sectors are artificial intelligence (1,579 deals; 150.41 billion yuan), healthcare (1,506 deals; 124.41 billion yuan), and integrated circuits (1,228 deals; 114.99 billion yuan).
- From the perspective of the growth rate of financing amount, energy storage has emerged as the biggest dark horse of the year, with its financing amount increasing from 11.55 billion yuan to 47.98 billion yuan, a growth rate as high as 315.5%. The amount increase in the robotics track also reached 220.1% (from 21.85 billion yuan to 69.93 billion yuan).
- In sectors such as integrated circuits, new energy, and commercial space, there has been a phenomenon of "increasing number of events and decreasing amount".





https://mp.weixin.qq.com/s/yRqcdvtbbdRQKjZEU-E3dg

- Over the past five years, financing in hard technology sectors such as drones, robots, new materials, and aerospace has doubled or even increased several-fold.

2025年中国一级市场高增长赛道统计

行业	2021年融资事件数量	2021年融资金额（亿元）	2025年融资事件数量	2025年融资金额（亿元）	数量增长率（%）	金额增长率(%)

AI and Robots Dominate the New Landscape: The List of New Unicorns in 2025

- The total number of unicorn enterprises on the list from China reached 469.
- A total of 46 companies newly became unicorns (49 in 2024), including star enterprises such as Galaxy Universal Robotics, CATL Times Intelligence, Fusion Energy, and Xinlian Pioneer. Among the newly emerged unicorns, 10 are in artificial intelligence, 7 in intelligent robotics, 6 in healthcare, and 4 in aerospace .
- 22 unicorn enterprises successfully went public, with 17 choosing the Hong Kong Stock Exchange, accounting for as high as 77%. The other 5 chose A-shares, and not a single unicorn enterprise chose to go public in the US stock market.

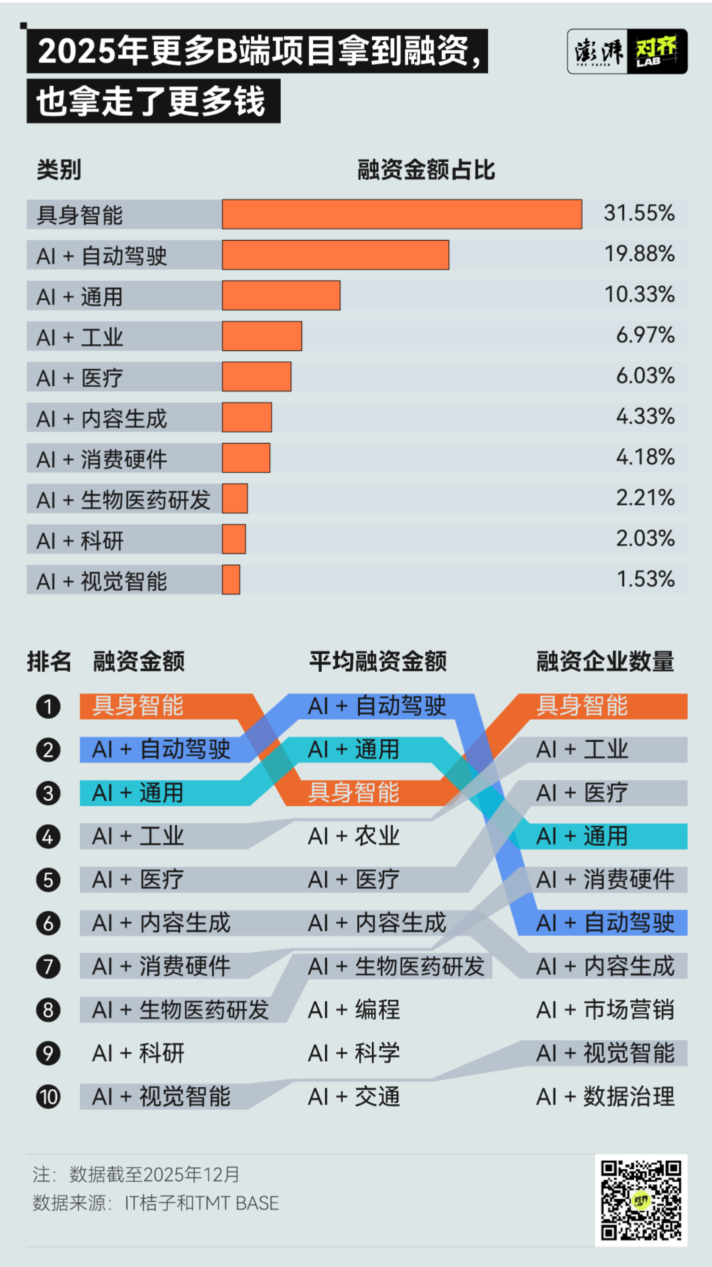
Investment and financing in AI subfields

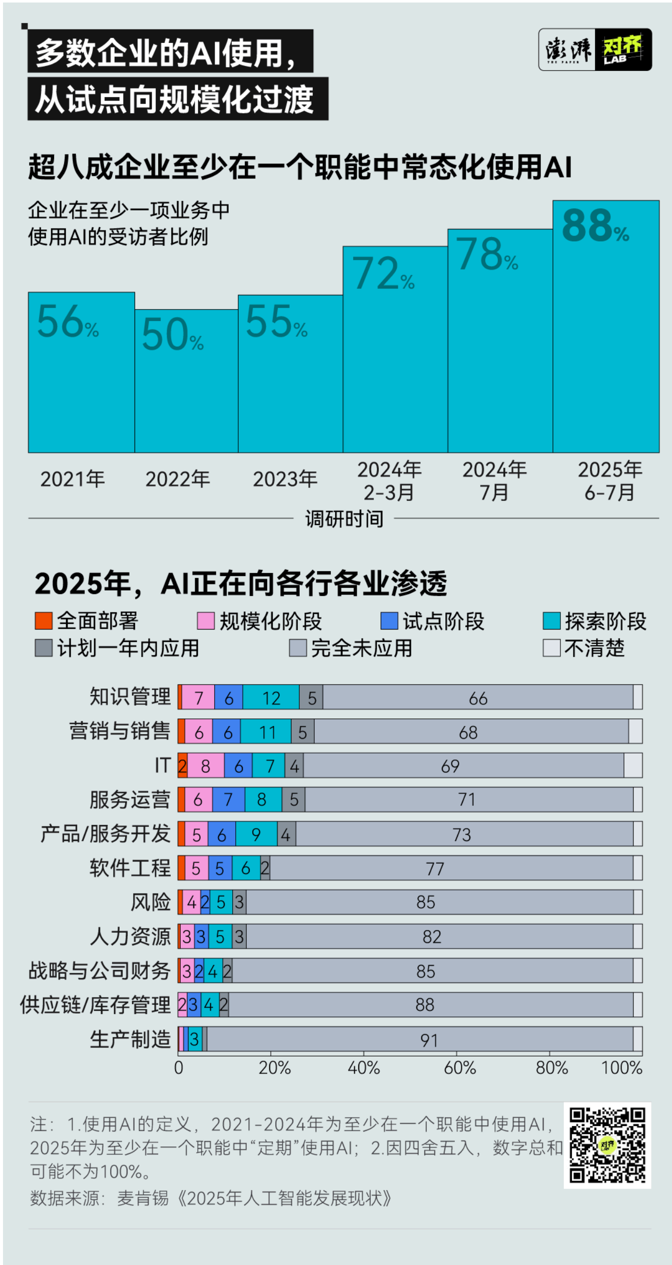
Investment and Financing in AI Subfields & AI's Scenario Penetration | Compiled by The Paper

> Data sources include IT Juzi, Titanium Media TMTBASE's "2025 AI Sector Investment and Financing Report", and McKinsey's "2025 Artificial Intelligence Development Status"

https://m.thepaper.cn/newsDetail_forward_32325621

- **Throughout the year, 930 AI enterprises successfully secured financing, with a total amount reaching 107.07 billion yuan.**
- **The Top 10 tracks of AI Application Scenarios accounted for 89.04% of the financing amount：** Embodied Intelligence *(including component, model algorithm, and data companies specifically serving embodied intelligence enterprises)*, 194 companies, accounting for as high as 20.9%; Industry, Healthcare, General *(including model manufacturers of "model as application" and service providers offering AI solutions for a wide range of industries),* Consumer Hardware, Autonomous Driving, Content Generation, Marketing, Visual Intelligence, and Data Governance.
- **To B projects have taken more money:** Among the top 10 financing scenarios, six areas including industry, healthcare, autonomous driving, marketing, visual intelligence, and data governance are all purely ToB scenarios. If we consider that embodied intelligence currently mainly serves industrial scenarios, 62.17% of the enterprises in the top 10 are engaged in ToB business.





Detailed Data on Investment and Financing in AI Subfields | IT Juzi, Titanium Media

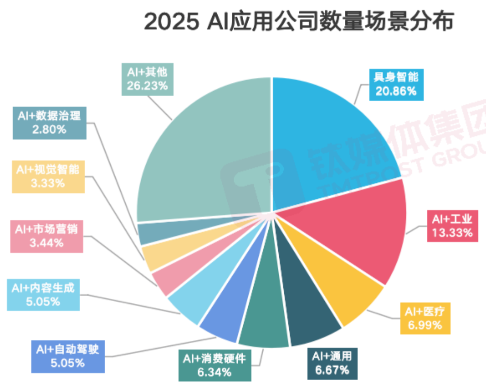
Source: IT Juzi, Titanium Media TMTBASE "2025 AI Field Investment and Financing Report", Statistical Time Up to December 2025

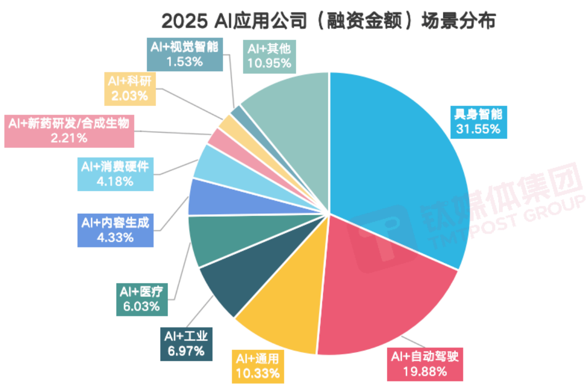
https://mp.weixin.qq.com/s/mHHYLD-dRDCQjQJT9xpNRA

- **Comparison of Financing Quantity**
    - **The top ten scenarios are, in order:** Embodied Intelligence *(including component, model algorithm, and data companies specifically serving embodied intelligence enterprises)* , with 194 companies, accounting for as high as 20.9%; Industry, Healthcare, and General *(including model manufacturers with "model as application" and service providers offering AI solutions for a wide range of industries),* Consumer Hardware, Autonomous Driving, Content Generation, Marketing, Visual Intelligence, and Data Governance .
    - In the **industrial and medical** scenarios, **more than 5 years of traditional digital service providers have obtained the concept of "AI" through transformation, accounting for more than 50%.**
        - Scenarios such as scientific research, consumption, new drug R&D/synthetic biology, companionship, education, work, culture and entertainment, transportation, finance, and drones, **the number of financing enterprises ranks in the "second echelon", with a combined proportion of 21%.**

- **Financing Amount Comparison**
    - **TOP 3 scenarios** *(embodied intelligence, autonomous driving, general)* accounted for more than half of the total financing amount, reaching 51.6%; the total financing amount of TOP3 10 scenarios accounted for 89% of the total financing amount.
    - **Embodied Intelligence leads (33.77 billion RMB)**
    - Two scenarios that dropped out of the Top 10 in total financing amount:**Marketing and Consumption**
    - Two new scenarios entering the Top 10:**New drug R&D/Synthetic Biology and Scientific Research**
    - **Comparison of Single Company Financing Scale (TOP 20)**

- 11 companies are from the embodied intelligence sector, covering the entire industrial chain of embodied intelligence: Leju and Yinhe General, which focus on industrial robots; Lingxin Qiaoshou, which specializes in dexterous hands; Yushu Technology, which develops quadruped robots; and Songyan Power, which works on small-sized humanoid robots.
- Four companies in the autonomous driving track made the list
- There are only 4 companies on the list of General Scenario companies *(Manus, Minimax, Dark Side of the Moon Kimi, Zhipu)*, although the number is less than that of Embodied Intelligence, the gold content is extremely high. *(The TOP 20 list of financing scale reveals a deeper industrial trend: the boundary between software and hardware is slowly disappearing.)*





From the perspective of capital concentration,**the proportion of the total financing amount of the TOP 3 scenarios***(Embodied Intelligence, Autonomous Driving, General)*accounts for**more than half of the total financing amount, reaching 51.6%**;**the total financing amount of the TOP 3 10 scenarios**accounts for**89% of the total financing amount**. The financing amount shows a highly concentrated trend, and the consensus is very clear.

数据来源：IT桔子、钛媒体TMTBASE

- **The money - attracting ability of a single project**
  - **Autonomous driving and general scenarios are the real winners, occupying the first and second places respectively with average single-project financing amounts of 450 million yuan and 170 million yuan.** (Autonomous driving has a relatively later average financing round compared to embodied AI)
  - The financing amount of the top-ranked autonomous driving project is higher than the sum of the second and third-ranked ones
  - The tracks ranked fourth to tenth *(agriculture, healthcare, content generation, new drug R&D/synthetic biology, programming, scientific research, transportation)* do not have significant differences, indicating that their financing rounds and valuation levels do not vary greatly.

Detailed Explanation of Embodied Intelligence Investment and Financing

https://mp.weixin.qq.com/s/m3saNDPF2jf0-LuqmRjNIQ

- As of December 21, 2025, there have been over 305 financing events in China's embodied intelligence sector this year, nearly tripling compared to last year; the total financing amount is estimated to exceed 38 billion yuan.
- The total number of investments made by 8 core large enterprises throughout the year reached 62, among which Baidu Ventures ranked first with 13 investments, followed closely by Lenovo Capital and Lenovo Star with 11 investments, and Guoxiang Capital (SenseTime) and Ant Group tied for third with 8 investments each, forming the first investment echelon.
  - In terms of investment intensity, the estimated total annual investment of the eight major companies ranges from 1.45 to 3.4 billion yuan. Except for iFlytek, whose single investment amount may be less than 100 million yuan, Baidu Ventures, Lenovo Capital & Incubator Group/Lenovo Star, Ant Group, Meituan/Meituan Longzhu, JD.com, etc., have all made large-scale investments of 200 to 500 million yuan.
- Throughout the year, the total number of investments made by 8 core traditional enterprise CVCs in embodied intelligence startups reached 43, with the estimated total investment amount exceeding 500 million yuan.
- Three emerging robotics companies made a total of 16 investments in embodied intelligence enterprises throughout the year.

今年有哪些互联网/科技/AI 巨头热衷投资具身智能公司？

/	CVC 投资方	投资次数	今年投资金额（估算）	侧重细分赛道	2025 年主要投资标的
1	百度风投	13	2-4 亿元	具身智能大脑、机器人本体	简智新创、星海图、萝博派对、深朴智能
2	联想创投/联想之星	11	3-5 亿元	机器人应用场景	逐际动力、原力灵机、自变量机器人、它石智航
3	国香资本（商汤）	8	1-3 亿元	AI 与具身智能技术，机器人本体	众擎机器人、帕西尼
4	蚂蚁集团	8	2-5 亿元	AI 算法、机器人本体	首形科技、灵心巧手、星尘智能
5	讯飞创投/科大讯飞	6	0.5-2 亿	机器人零部件及应用	灵猴机器人、聆动通用
6	美团/美团龙珠	6	2-5 亿元	具身智能大脑、机器人本体	妙动科技、自变量机器人、星海图
7	京东/京东云	6	2-6 亿元	具身智能大脑、机器人本体	千寻智能、众擎机器人、智元机器人
8	阿里巴巴	4	2-4 亿元	具身智能技术、机器人应用	原力灵机、穹彻智能、宇树科技

Addendum: AI Hardware Investment and Financing in the First Half of 2025

36Krhttps://mp.weixin.qq.com/s/3CTHK1ZvB4Jk6qzVxQuqZg

36Kr statistics show that by the first half of 2025, the number of investment and financing events in China's embodied intelligence and AI hardware reached 114, with the total financing amount exceeding 14.5 billion yuan. In May 2025 alone, the funds flowing into AI hardware accounted for more than 50% of all investment and financing.

HuXiuhttps://mp.weixin.qq.com/s/cZ2H_yKlAvD94yQUICUgHg

公司名称	所属品类	融资轮次	融资金额	备注
跃然创新	AI玩具	A轮系列	2亿元	投资方含中金资本旗下基金、红杉中国种子基金、华山资本等，老股东追投；2025年累计融资6轮
雷鸟创新	AI眼镜（AI+AR眼镜）	C轮	未明确披露	2025年11月7日融资，由中信金石领投，中信证券国际资本等参与
影目科技	AI眼镜	B2轮	超1.5亿元人民币	2025年7月融资，投资方含普华资本、梁溪产发集团等；
灵宇宙	随身AI终端	Pre-A轮系列（2025年第三轮）	2亿元	2025年11月融资，投资方含上海国际集团旗下国方创新、国泰海通、广发信德、滴滴出行等
萌友智能	AI陪伴机器人	A1轮	数千万元人民币	2025年9月融资，由北京市人工智能产业投资基金领投，峰瑞资本跟投
Rokid	AI眼镜	累计第13轮	未明确披露	累计融资额约35亿元人民币
贝陪科技	AI玩具	未明确披露	未明确披露	2025年获得融资，投资方包含奇迹创坛
二白智能	AI陪伴机器人	天使轮	1000万元人民币	投资方为君宸达资本独家投资

Representative financing cases (incomplete statistics) in the domestic AI hardware industry in 2025

Other References | Guotai Haitong Securities

https://mp.weixin.qq.com/s/Zbitn2SFWI9ek4X0pgCqwg

Annual

- There were 834 financing events for AI software applications in China, accounting for 26.2%
- There were 431 financing events in embodied intelligence, accounting for 13.6%
- The number of financing events in unmanned/intelligent driving was 362, accounting for 11.4%

2025H2:

Supported 127 cases of software/tools/ecosystem, a sequential decrease (-20 cases) compared to 2025H1

Core computing power chips start at 54, showing a sequential decline (-13 and above) compared to 2025H1

图 4：2025 年中国 AI 细分行业中，AI 软件应用、物理 AI（具身智能）、物理 AI（无人/智能驾驶）行业融资事件数位列前三（单位：起）

Global Statistical Data

CB Insights《State of AI | Global 2025 Recap》

CB-Insights_Artificial-Intelligence-Report-2025.pdf
9.59MB

⚠️ The following are all AI analysis results

Overview: High Concentration of Capital

- **Global AI financing reached $225.8B in 2025**, nearly **twice** that of 2024, hitting a record high
- **$100M+ mega-rounds accounted for 79% of all financing** , with capital clearly concentrated on a few leading projects
- **LLM developers alone took 41% of all AI financing ($93.1B)**, with OpenAI, Anthropic, and xAI together raising $86.3B

China-US Differences

维度	美国	中国
核心资金流向	LLM / Foundation Model	Robotics / Industry AI
单笔融资规模	极大（$1B+ 常态）	中等（$50–300M 为主）
竞争逻辑	算力 + 数据 + 资本	工程化 + 交付 + 场景
独角兽形态	平台型、基础设施型	应用/系统/硬件型

1. **Differences in the number and amount of financing**

(China ≈ an important part of Asia)

- 2025 **Global AI Financing: $225.8B, with Asia's annual financing accounting for approximately 20–22% (by number of transactions)**
- However, **the proportion of financing amount is significantly lower than that of transaction volume**
  - US: Transaction volume ~51%, financing amount far exceeds 60%
  - Asia (including China): Transaction volume ~22%, financing amount significantly lower

2. **Differences in single financing scale: Mega-rounds were absent almost throughout the year**

- 2025 **Global $100M+ mega-round financing accounts for 79%**
- The vast majority of mega-rounds come from the US, concentrated in LLM / computing power / AI infra
- **China has almost no $1B-level AI mega-rounds throughout the year,** with occasional $100–300M rounds, but weak sustainability

3. **Annual track structure:**

- **Directions without an advantage:** General-purpose LLM / Frontier Model; Global platform for AI infrastructure; General-purpose Agent platform (in 2025 **41% of global AI financing will flow to LLM developers** , almost all in the US)
  - China has little dominance in **global LLM financing**
  - 41% of global financing flows to LLM developers, **mainly concentrated in the US**
  - China has not seen financing and valuation cases on the scale of OpenAI / Anthropic
- **Advantage Direction:** From the perspective of **Series A–D and Top Asia deals** throughout the year, Chinese projects are highly concentrated in
  - Robotics / Embodied Intelligence: Industrial robots, humanoid robots, automation systems, warehousing / manufacturing / logistics (Robotics is **the track with the highest proportion of global AI transactions in 2025 (11.4%)**, with significant contributions from China)
  - Autonomous Driving & Intelligent Transportation: Robotaxi, Unmanned Logistics, Vehicle-Road Collaboration
  - AI + Manufacturing / Energy / Engineering Systems: Emphasizes **system integration, engineering delivery, and domestic substitution, significantly different from the US's "platform-based AI"**

> Chinese AI is more like "**AI-enabled industrial systems**" rather than "AI-native platform companies"

4. **Unicorn and corporate forms throughout the year: few and skewed towards the hard**

- 75 new AI unicorns will emerge globally in 2025, with the US accounting for an absolute majority
- Most Chinese unicorns are in the fields of hardware, system, or automation, with few being pure software or model platforms

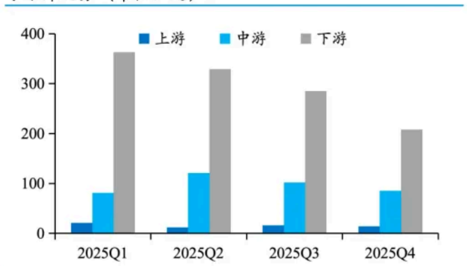
https://mp.weixin.qq.com/s/Zbitn2SFWI9ek4X0pgCqwg

In 2025, the number of financing events in the upstream computing power hardware layer of the overseas AI industry was 63, accounting for 3.8%; the number of financing events in the midstream model and support layer was 389, accounting for 23.8%; the number of financing events in the downstream application service layer was 1185, accounting for 72.4%. Among the downstream application service layer, the number of financing events in the hardware industry was 160, accounting for 9.8%, and the number of financing events in the software industry was 1025, accounting for 62.6%. Quarterly, the number of financing events in the upstream computing power and basic hardware layer fluctuates at a low level between 2.6% and 4.6%. Compared with China's 15.5% share, the overseas computing power hardware layer has a higher industry concentration. Tapeout costs and production capacity barriers have pushed this track into the "capital expenditure competition" stage dominated by technology giants; the proportion of financing events in the midstream model and support layer shows a characteristic of first rising and then stabilizing, with the proportion in 2025Q1 being only 17.4%, and fluctuating between 25.3% and 27.7% from 2025Q2 to 2025Q4;Compared with China's 15.5% share, overseas capital has increased its investment in the model and support layers, betting heavily on the "foundation" to gain the right to set future rules; the downstream application service layer remains the focus of financing activities. Although the absolute value has been decreasing quarter by quarter, the proportion of financing events has always remained at 67.8% or above.

图 10：2025 年海外 AI 下游应用服务层融资事件数量呈逐季下降趋势（单位：起）



数据来源：企名片、天眼查 APP、36 氪、finsmes、国泰海通证券研究

图 11：2025 年海外 AI 下游应用服务层融资事件数量占比维持在 67.8%及以上（单位：%）

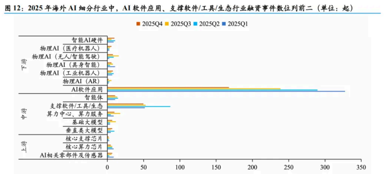
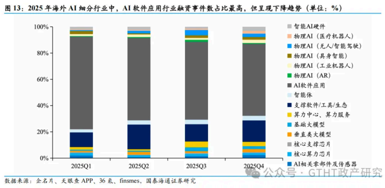
图 12：2025 年海外 AI 细分行业中，AI 软件应用、支撑软件/工具/生态行业融资事件数位列前二（单位：起）



数据来源：企名片、天眼查 APP、36 氪、finsmes、国泰海通证券研究

图 13：2025 年海外 AI 细分行业中，AI 软件应用行业融资事件数占比最高，但呈现下降趋势（单位：%）



数据来源：企名片、天眼查 APP、36 氪、finsmes、国泰海通证券研究

Among the sub-sectors, the number of financing events in overseas AI software applications, supporting software/tools/ecosystem accounted for a relatively high

proportion, and the number of financing events in the computing power center, computing power service/physical AI (unmanned/intelligent driving)/basic large model industries increased significantly quarter-on-quarter in 2025H2. Based on the data compilation from mainstream databases in the primary market, the number of financing events in overseas AI software applications/(supporting software/tools/ecosystem) industries in 2025 was 1,025/242, accounting for 62.6%/14.8%, ranking first and second; the proportion of financing events in the remaining industries was all below 5%.On a semi-annual basis, in 2025H2, the number of financing events in the computing power center, computing power service/physical AI (driverless/intelligent driving)/basic large model industries was 28/24/19, showing a significant sequential increase compared to 2025H1 (+14/+12/+11 events); the number of financing events in the AI software application industry was 407, with a sequential decrease of 211 events compared to 2025H1, representing a substantial decline. The above structural changes indicate that the overseas AI financing market in 2025H2 has undergone a profound shift from an "application frenzy" to an "infrastructure and base arms race".Capital has heavily invested in a few large foundational model companies regarded as AGI candidates (such as OpenAI and Anthropic) on a "super financing" scale, vying for the rule-making power of the next generation of artificial intelligence, and investing in computing power infrastructure to support this competition; In downstream investment, it also tends to be rational, shifting from "casting a wide net" to the unmanned/intelligent driving industry with monetization potential.

PitchBook: The AI Investment Battle Will Fully Unfold in 2026: A Trillion-Dollar Track Has Emerged. Who Will Rise? Who Will Be Eliminated?

https://mp.weixin.qq.com/s/wAuXMiiGNISxDqsi0tC8Eg

https://mp.weixin.qq.com/s/B9qXhVJGTNbAIXgq81mZxg

Three major golden tracks nurture the greatest investment opportunities

In the healthcare field, AI drug discovery tools are the top choice, with the total market size expected to grow from $1.6 billion in 2025 to $60 billion in 2030, at an annual growth rate as high as 106%. AI technology is expected to increase the success rate of clinical trials from 8% to 17%, thereby significantly increasing the number of trials and drugs on the market.

In the enterprise technology domain, analysts are bullish on foundational models, agent commerce tools, AI-focused data management, and customer service and support. Foundational model providers continue to attract the most attention, as their products are becoming the default infrastructure for an increasing number of enterprise AI workloads.

In the field of deep technology, autonomous maritime systems, AI-derived agricultural biologics, data center power and decarbonization, as well as autonomous driving and perception software are highly favored. The report predicts that "almost every vehicle type will be autonomous within the next three decades."

In the consumer technology field, the world model in games is the preferred choice. AI provides the ability to instantly create new worlds and experiences, which will redefine game design, agency, and game loops.

Ten traditional industries face the risk of being disrupted by AI:

The production of high-budget game content is the first to be affected. The development cost of AAA games has soared to $250 million to $700 million, while consumers are reluctant to pay higher prices in the face of content oversupply. AI will streamline the production costs of the high-end cost spectrum and raise the quality floor of the low end.

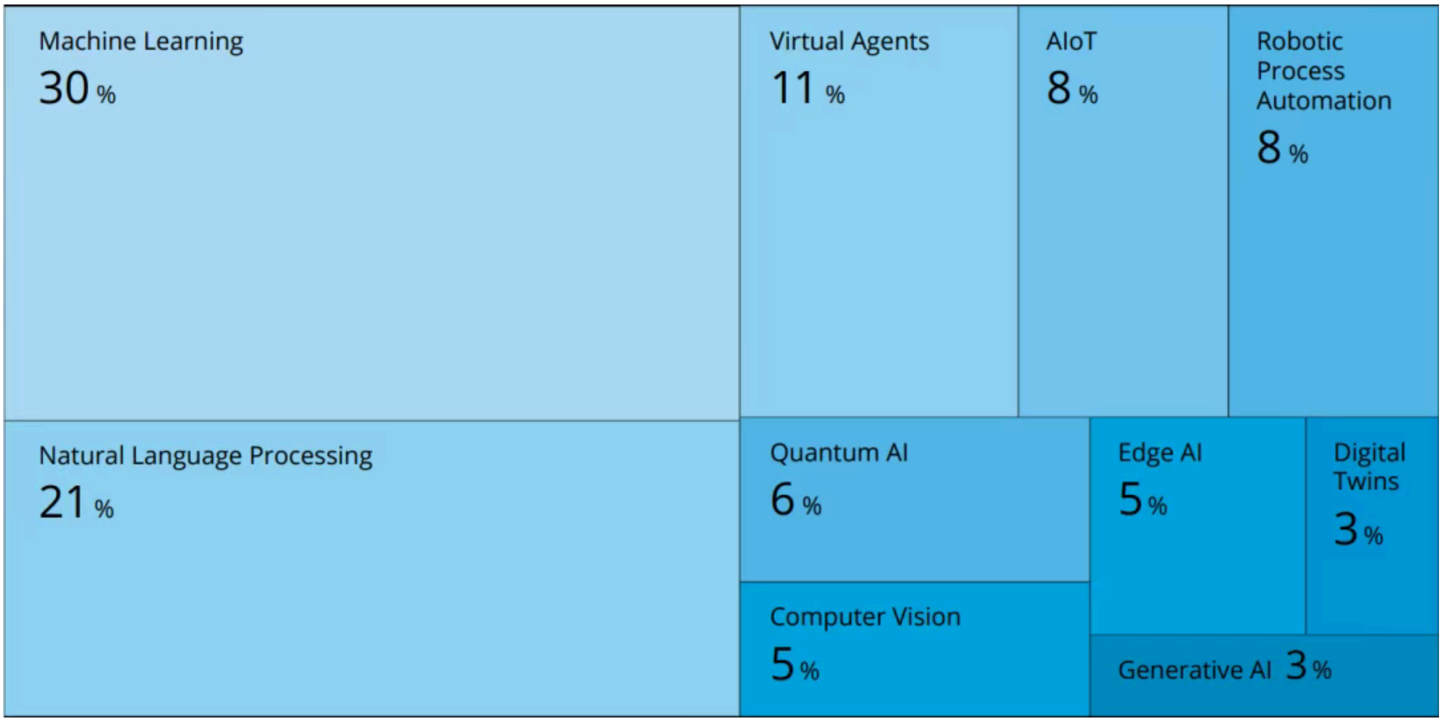
Traditional analytics and business intelligence platforms also face the risk of being phased out. The core value proposition of traditional BI is becoming increasingly obsolete due to surrogate AI and natural language query. The paradigm is shifting from user navigation to dashboards to insights being delivered conversationally and contextually within workflows.

Other high-risk industries include traditional ERP, accounting and capital markets software, traditional medical device manufacturers, traditional trucking, traditional healthcare management, etc.

2026 Artificial Intelligence Trends Report | AI Enters the Golden Age: Nine Global AI Trends and Innovation Blueprint

https://mp.weixin.qq.com/s/FOzGA5mdO4buWD4TFFVbdQ

Tree Diagram of the Influence of the Top 10 AI Trends - Proportion of Each Technology



- **Machine Learning (30%)**
  - **Application Scenarios**: From inventory tracking, market forecasting to personalized medicine, Machine Learning is becoming a core tool for enterprises to reduce costs and increase efficiency.
  - **Innovation Directions**: Technologies such as AutoML, low-code/no-code platforms, deep learning, and reinforcement learning lower the usage threshold.

  - **Typical Case**:
    - **Grid.ai (US)**: Provides a no-code Machine Learning Model Training platform, supporting rapid model iteration in the cloud.
    - **Agrinorm (Switzerland)**: Optimize quality management in the fruit and vegetable supply chain using Machine Learning to improve resource allocation efficiency.
- **Natural Language Processing (21%)**
  - **Technological Progress**: NLP technology has gradually achieved multilingual understanding and automated communication, and is applied in fields such as customer service, contract review, and academic writing.
  - **Enterprise Applications**: Improve response efficiency, enable large-scale text analysis, and support multi-language task automation.
  - **Typical Case**:
    - **Robin AI (United Kingdom)**: AI contract review software that automatically identifies clauses and generates a clickable table of contents.
    - **WriteWise (Chile)**: An AI-based academic paper proofreading tool that enhances writing quality and efficiency.
- **Virtual Agent (11%)**
  - **Functional Evolution**: From basic Q&A to emotion recognition and personalized interaction, virtual agents are becoming the core interface for enterprise digital interaction.
  - **Industry Penetration**: Widely applied in sectors such as retail, food, human resources, etc., to enhance customer engagement and internal process efficiency.
  - **Typical Case**:
    - **Replikt (New Zealand)**: Intelligent virtual avatar that identifies user emotions and builds emotional connections through conversational AI.
    - **Auto Labs (US)**: AI Customer Experience Management Platform, enabling personalized appointment reminders and itinerary management.
- **Robotic Process Automation (8%)**
  - **Value Proposition**: Replace repetitive and rule-based tasks, improve operational accuracy, timeliness, and process flexibility.
  - **Application Scenario**: Document and process-intensive industries such as logistics, finance, insurance, and real estate.
  - **Typical Case**:

        - **Rippey AI (US)**: Logistics automation platform that processes shipping documents and optimizes supply chain visibility.
        - **Tatesoft (Denmark)**: A low-code RPA platform that supports rapid process automation and robot deployment.
- **Artificial Intelligence of Things (8%)**
    - **Technological Convergence**: The combination of AI and IoT enables Edge Computing and near real-time data processing, reducing costs and improving analysis efficiency.
    - **Application Scenario**: Smart Agriculture, Building Occupancy Management, Industrial Monitoring, etc.
    - **Typical Case**:
        - **M8 Systems (US)**: Intelligent Agriculture Platform, supporting AIoT irrigation automation and water resource management.
        - **Built (US)**: Wireless people counting and occupancy sensing platform to optimize space utilization and operational costs.
- **Quantum Artificial Intelligence (6%)**
    - **Technological Breakthrough**: Quantum Computing provides supercomputing power for AI, driving leapfrog development in the ability to solve and optimize complex tasks.
    - **Application Area**: Manufacturing, Life Sciences, Finance, Encrypted Communication, etc.
    - **Typical Case**:
        - **Quantica Computacao (India)**: Quantum AI platform, focusing on quantum encryption, quantitative trading, and asset management.
        - **Menten AI (US)**: Combining Machine Learning and Quantum Computing for peptide drug design to accelerate new drug discovery.
- **Edge Artificial Intelligence (5%)**
    - **Core Advantages**: Reducing latency, saving bandwidth and energy consumption, and supporting real-time data processing and local intelligent decision-making.
    - **Collaborative Ecosystem** : Combined with 5G and high-performance computing, it promotes the development of autonomous driving, smart cities, and industrial automation.
    - **Typical Case**:
        - **EdgeQ (US)**: 5G base station single-chip solution, supporting AI inference to run at the edge.
        - **AlKaan Labs (India)**: AIoT cloud controller, enabling data collaboration and anomaly early warning for edge devices.

- **Computer Vision (5%)**
  - **Application Expansion**: Penetrating from autonomous driving into fields such as healthcare, agriculture, security, retail, sports, etc.
  - **Technical Subdivision**: Technologies such as face recognition, emotion analysis, motion detection, and object tracking continue to mature.
  - **Typical Case**:
    - **Kemtai (Israel)** : AI visual fitness platform that analyzes movement postures in real time and provides training guidance.
    - **VizioSense (France)**: Intelligent parking solution that enables parking space monitoring and management through visual sensors.
- **Digital Twin (3%)**
  - **Value Highlights**: Reducing physical prototypes, optimizing process design, and achieving predictive maintenance and human-machine collaboration.
  - **Industry Applications**: Manufacturing, Construction, Energy Management, and even "Knowledge Digital Twin" for personal behavior simulation.
  - **Typical Case**:
    - **Gradyent (Netherlands)**: Digital twin for district heating, optimizing energy distribution and reducing emissions.
    - **MindBank AI (US)** : Personal knowledge digital twin, simulating user thinking and supporting dialogue and inheritance.
- **Generative Artificial Intelligence (3%)**
  - **Innovation Frontiers**: Autonomously generating creative outcomes based on content such as text and images, driving paradigm shifts in fields such as art, design, and drug discovery.
  - **Application Scenarios** : Virtual Try-On, Molecular Generation, Content Creation, Film and TV Restoration, etc.
  - **Typical Case**:
    - **Veesual (France)**: Generative AI virtual fitting room to enhance the e-commerce shopping experience.
    - **Variational AI (Canada)**: A generative AI-driven new molecule discovery platform that accelerates drug R&D.
