

Founder Profile: Teng Jiaye (Jiaye Teng)

v1

Founder Profile: Teng Jiaye (Jiaye Teng)

Basic Information

- Current Position: Tenure-track Assistant Professor, School of Statistics and Management / School of Statistics and Data Science, Shanghai University of Finance and Economics
- Educational Background: Ph.D. from Institute for Interdisciplinary Information Sciences (Yao Class/IIIS), Tsinghua University → Bachelor's Degree from School of Mathematics, Shanghai University of Finance and Economics
- Location: Shanghai
- Contact Information:
 - 邮箱: tengjiaye [at] [sufe.edu.cn](mailto:tengjiaye@sufe.edu.cn)
 - Personal Homepage: <https://tengjiaye.com/>
 - Zhihu: <https://www.zhihu.com/people/teng-jia-ye-39> (IP location: Shanghai, low activity)
 - Google Scholar: <https://scholar.google.com/citations?user=m2xyFk4AAAAJ>
 - OpenReview: https://openreview.net/profile?id=~Jiaye_Teng2
- Office: 1307

Career Trajectory

Time	Organization	Position	Key Information
2024.7 to present	School of Statistics and Management, Shanghai University of Finance and Economics	Tenure-track Assistant Professor	Returned to alma mater to teach, research interests: generalization theory, Machine Learning, and statistics

2020-2024	Institute for Interdisciplinary Information Sciences (IIIS), Tsinghua University	Doctoral student	Supervisor: Assistant Professor Yuan Yang (Yao Qizhi Team), with co-authored papers with Mr. Yao Qizhi
~2016-2020	School of Mathematics, Shanghai University of Finance and Economics	Undergraduate	Mathematics and Applied Mathematics major (presumed), First Prize in the Shanghai Division of the 2018 National Mathematical Modeling Competition

Entrepreneurial History

- No entrepreneurial record, Tianyancha/Qichacha has not found any company with "Teng Jiaye" as the legal representative or shareowner
- No financing record

- Entrepreneurial Behavior:

- ★ **Co-Founder/Organizer of FAI-Seminar** - This is an online Chinese seminar themed on "Foundations of Artificial Intelligence" (International Seminar on Foundational Artificial Intelligence), held every Friday from 10:00-11:00 AM (Beijing Time), with recorded/LIVE broadcasts available on Bilibili, and the total number of video views has exceeded 200,000. Official website: <https://www.fai-seminar.ac.cn/>

- FAI-Seminar's WeChat official account: 【Basic Research in Artificial Intelligence】
- Teng Jiaye is the **first organizer** (the first in the Organizers list) of this seminar, and other organizers include Wang Bohan (USTC), Wen Kaiyue (Stanford), Zhang Bohang (Peking University), Ma Jianhao (UMich), Zhang Dinghuai (Mila), etc.
- Since 2022, this seminar has been in operation until now (still active in 2026), and has invited speakers from top institutions such as UCB, Princeton, Tsinghua, Peking, CMU, and TTIC

Technical Competence

Paper Publication (Semantic Scholar + Aggregated Public Information)

Top Conference Papers (Confirmed):

Paper	Meeting	Year	Role	Highlights of Collaborators
T-SCI: A Two-Stage Conformal Inference Algorithm with Guaranteed Coverage for Cox-MLP	ICML 2021	2021	A work	Yuan Yang
Fighting Fire with Fire: Avoiding DNN Shortcuts through Priming	ICML 2022	2022	Collaborator	Chuan Wen, Dinesh Jayaraman

| Predictive Inference with Feature Conformal Prediction | ICLR 2023 | 2022/2023 | First Author | **Yoshua Bengio** (Turing Award Winner), Dinghuai Zhang, Yuan Yang |

| On Uni-Modal Feature Learning in Supervised Multi-Modal Learning | ICML 2023 | 2023 | 合作者 | Chenzhuang Du, 袁洋 |

| Finding Generalization Measures by Contrasting Signal and Noise | ICML 2023 | 2023 | 一作 | Bohang Zhang, 袁洋 |

| Towards Revealing the Mystery behind Chain of Thought | NeurIPS 2023 | 2023 | Collaborators | Yuan Yang, Yao Qizhi (Andrew Yao) |

| Minimax Optimal Two-Stage Algorithm For Moment Estimation Under Covariate Shift | ICLR 2025 | 2025 | 合作者 | 一 |

| Generalization Lower Bounds for GD and SGD in Smooth Stochastic Convex Optimization | AISTATS 2025 | 2025 | 合作者 | Peiyuan Zhang, Jingzhao Zhang |

Recent preprints/submissions (2025-2026):

- What Makes Looped Transformers Perform Better Than Non-Recursive Ones (Provably)
- Disentangling Feature Structure: A Mathematically Provable Two-Stage Training Dynamics in Transformers
- Theoretical Modeling of Large Language Model Self-Improvement Training Dynamics Through Solver-Verifier Gap

- Questioning the Coverage-Length Metric in Conformal Prediction
- Smoothing-Based Conformal Prediction for Balancing Efficiency and Interpretability
- Matrix Sensing with Kernel Optimal Loss: Robustness and Optimization Landscape
- Generalization Bounds of Stochastic Gradient Descent in Homogeneous Neural Networks (2026)

Quantitative Assessment

- Top conference papers: $\text{ICML} \times 3, \text{ICLR} \times 2, \text{NeurIPS} \times 1, \text{AISTATS} \times 1 = \mathbf{7 \text{ top conference papers}}$ (extremely productive during the doctoral program)
 - One top conference: at least 3 papers (ICML 2021, ICLR 2023, ICML 2023)
- The collaborator network includes **Turing Award winners** (Yoshua Bengio, Yao Qizhi)
 - Google Scholar Citation Count: Requires offline verification (Scholar page exists but specific number could not be retrieved)
 - Since independence (2024 to present), there have been multiple manuscripts under review/preprints, and the pace of output has not slowed down

Evolution of Research Directions

- **Early stage (2019-2021):** ℓ_1 Adversarial Robustness, Conformal Prediction, Survival Analysis
- **Mid-term (2022-2023):** Generalization Theory, MultiModal Machine Learning, DNN shortcut problem, Feature Conformal Prediction
- **Near-term (2024-2026) :** **Transformer theoretical analysis** (Looped Transformer, training dynamics), **LLM self-improvement theoretical modeling**, Scaling Law theoretical boundary, new directions in conformal prediction
- **Evolutionary Trend :** From statistical inference $\rightarrow$ Deep learning theory $\rightarrow$ **LLM/Transformer theory**, the direction is getting closer and closer to the current core issues at the forefront of AI

Collaborative Researcher Network

- **Yuan Yang** (Assistant Professor and Doctoral Supervisor at Tsinghua Institute for Interdisciplinary Information Science) - Doctoral Supervisor and long-term core collaborator
- **Yao Qizhi** (Turing Award winner) - NeurIPS 2023 co-authored paper
- **Yoshua Bengio** (Turing Award winner) — ICLR 2023 Feature Conformal Prediction
- **Dinghuai Zhang** (Mila/Montreal) - Conformal Prediction Collaboration
- **Jingzhao Zhang** (Tsinghua) - Optimization Theory Collaboration

- **Chuan Wen** (Tsinghua) - Multiple Collaborations
- **Peiyuan Zhang** — Generalization Lower Bound Collaboration
- **Yong Liu** — Transformer Theory Collaboration (Recent High-Frequency Collaborator)

Social Media & Public Influence

Platform	Account/Link	Activity	Remarks
Personal Homepage	https://tengjiaye.com/	Under Maintenance	Standard academic homepage, additional information: visited Princeton, supervisor Sanjeev Arora; undergraduate supervisor Yang Bai
Zhihu	https://www.zhihu.com/people/teng-jia-ye-39	Medium to Low	IP location: Shanghai, received 3,671 upvotes, 695 likes, 1,395 bookmarks; opened paid consultation (1 consultation); followed issues related to ML flooding
Bilibili	FAI-Seminar Official Account (Organizer Identity)	High	Total video plays exceed 200,000, with academic talk recordings updated weekly
WeChat Official Account	[Fundamental Research on Artificial Intelligence] (Official of FAI-Seminar)	Active	Operated as an organizer, used for seminar announcements and community entry
Google Scholar	https://scholar.google.com/citations?user=m2xyFk4AAAAJ	—	exists

OpenReview	~Jiaye_Teng1 / ~Jiaye_Teng2	—	Two profiles (undergraduate/Ph.D.)

Xiaoyuzhou/Podcast	Not Found	—	—
Weibo/Rednote	Not Found	—	—

Public Speaking/Events

- **July 2021:** PaperWeekly AI Drive Bilibili LIVE, interpreting the ICML 2021 paper T-SCI (recording available on Bilibili)
- **August 2022:** Speaker at FAI-Seminar, topic "Predictive inference with feature conformal prediction" (ICLR 2023 paper), recorded video available on Bilibili
- **December 2024:** Speech at the Special Forum on "Non-consensus Research and Innovation" of the First Pujiang AI Academic Annual Conference - Discussing the theoretical boundary issues of Scaling Law by analogy with Phillips Curve vs. Mendel's Law of Heredity, reported by multiple media outlets such as Sina Finance and CSDN
- **October 2024:** Participated in the signing ceremony between Chongming District Bureau of Statistics and School of Statistics and Management of Shanghai University of Finance and Economics (as a representative of young teachers)
- **2022 to present:** Organizer of FAI-Seminar (weekly operation), with the total number of video views on Bilibili @FAI-Seminar channel exceeding 200,000

Community Operations (Important Findings)

- **FAI-Seminar** (<https://www.fai-seminar.ac.cn/>)
 - Orientation: An online Chinese seminar focusing on the fundamentals of artificial intelligence (primarily Machine Learning theory)
 - Frequency: Every Friday from 10:00 to 11:00 AM (Beijing Time)

- Participation Method: Follow the official account [Artificial Intelligence Basic Research], send [FAI], and join the WeChat group
 - Bilibili Account: @FAI-Seminar, Total Video Views Exceed 200,000
 - Operating Time: 2022 to Present (Still Active in 2026, Latest Talk in March 2026)
 - Speaker sources: UCB, Princeton, Stanford, Tsinghua, Peking University, CMU, TTIC, USTC, CUHK, etc.
 - Organizer Team: Teng Jiaye (Shanghai University of Finance and Economics), Wang Bohan (University of Science and Technology of China), Wen Kaiyue (Stanford), Zhang Bohang (Peking University), Ma Jianhao (UMich), Zhang Dinghuai (Mila), Gu Xinran (Tsinghua University), Luo Shengjie (Peking University), Huang Wei, etc.
- **Significance** : This is one of the most active academic seminars in the Chinese ML Theory Community. As the first organizer, Teng Jiaye is actually operating a transnational academic community

Cross-validation of co-founders

Not applicable (non-entrepreneur)

Public Evaluation and Public Opinion

Positive Signal

- Mr. Yao Qizhi specifically mentioned the category theory work of the Yuan Yang team at the Pujiang AI Academic Annual Conference, and Teng Jiaye is a core member of this team
- The speech at the "Non-consensus" Forum of the Pujiang AI Academic Annual Conference was cited by multiple media outlets, presenting unique perspectives (the "DNA" analogy of Scaling Law)
- During his doctoral studies, he co-authored papers with two Turing Award laureates, and his academic network is extremely top-notch
- A CSDN blogger commented on his speech at the Pujiang Annual Conference: "Mr. Teng Jiaye from Shanghai University of Finance and Economics used the contemporary failure of the Phillips Curve theory in economics to remind us that in researching theories such as the scaling law of large models, we should avoid revisionism."

Negative Signals / Controversies

- **No negative information was found**
 - No academic disputes, no legal issues, no public complaints

Red Flag Detection

Deadly Red Flag

- None

Important Risks

- None

Focus Points

- Business experience is completely blank, and FAI-Seminar also lacks a business closed loop
- No LinkedIn, but has Twitter @JiayeTeng (found in v2 report) and WeChat adoutengjiaye (publicly shown in Bilibili videos)
- Note: There is an actor with the same name "Teng Jiaye" (in the film and television industry) in the search, which needs to be distinguished

Entrepreneurial Spirit Assessment

Dimension	Assessment	Evidence
-----------	------------	----------

| Initiative Signal | **High** | Founded and continuously operated FAI-Seminar (since 2022, one episode per week, with over 200,000 views on Bilibili), which is a typical "extra task" |

| Risk Preference | **Medium** | Jumping from undergraduate studies at Shanghai University of Finance and Economics to pursuing a doctoral degree at Tsinghua IIIS (a higher-difficulty path), visiting Princeton (stepping out of the comfort zone), returning to alma mater but founding a transnational academic community |

| Execution Ability | **High** | 7 top conference papers during 4 years of doctoral study, with extremely high output density; FAI-Seminar has been continuously operated for 4 years without interruption |

| Influence Pursuit | **Medium** | Established influence in the ML theory community through FAI-Seminar, but does not engage in personal brand operation (no Twitter/LinkedIn) |

| Networking Ability | **Extremely High** | Collaborated with two Turing Award laureates; FAI-Seminar organizer network spans UCB/Stanford/Princeton/Tsinghua/Peking/CMU/Mila; Visited Princeton under the guidance of Sanjeev Arora |

Investment Potential Assessment

Track Match: ★★★★★

- Research directions (Transformer theory, LLM self-improvement theory, Scaling Law boundaries) **precisely align with the forefront of AI theory**

- Conformal Prediction is a core technology for AI safety/reliability, with significant monetization potential
- Generalization theory is a fundamental scientific issue for understanding and improving large models

Timing Signal: ★★★★★ (Requires offline verification)

- Just joined the tenure-track in 2024, currently in the early stage of academic career development
- However, the research direction from 2025 to 2026 has clearly shifted to LLM training dynamics (Solver-Verifier Gap), and is moving closer to application
- FAI-Seminar has been upgraded to the FAIC 2026 Offline Conference (with over 400 participants, hosted by Shanghai University of Finance and Economics), and its organizational capabilities continue to be upgraded
- Year 2 of the tenure-track, may be in the window period of considering future directions

Accessibility: ★★★★★

- WeChat: adoutengjiaye (publicly available in Bilibili videos)
- Email: tengjiaye@sufe.edu.cn
- FAI-Seminar WeChat Group: Follow the official account "Fundamental Research in Artificial Intelligence" and send "FAI" to join the group
- Twitter: @JiayeTeng
- Bilibili private message: @ Teng Jiaye
- In Shanghai, the FAIC Conference can serve as a sponsorship/participation outreach channel

Technology Stack Portrait

- **Core Competencies:** AI Theory (Generalization, Optimization, Transformer Analysis), Statistical Inference (Conformal Prediction), LLM Theoretical Modeling

- **Monetization Path:**

- 1. AI Model Reliability/Uncertainty Quantification (Conformal Prediction → Finance/Healthcare/Autonomous Driving)
- 2. LLM Training Efficiency Optimization (Scaling Law Theory → Reducing Training Costs)
- 3. Theoretical Tools for AI Safety and Alignment

Reach Path

Channel	Specific Approach	Difficulty
Contact directly via WeChat	adoutengjiaye (publicly shown in a Bilibili video)	Low
Direct Mail	tengjiaye@sufe.edu.cn	Low
FAI-Seminar WeChat Group	Follow the official account "Artificial Intelligence Basic Research" and send "FAI" to join the group	Low
Bilibili Private Message	@Teng Jiaye	Low
Twitter	@JiayeTeng	Low
Mentor Recommendation	Recommended by Yuan Yang (Tsinghua Institute for Interdisciplinary Information Science)	Medium
FAIC Conference	Held in April 2026 (Shanghai University of Finance and Economics, over 400 participants), it can serve as a sponsorship/participation channel for 2027	Medium
Internal to Shanghai University of Finance and Economics	Through the School of Statistics and Management, School of Computer	Medium

	Science and Artificial Intelligence (Dean Lu Pinyan) of Shanghai University of Finance and Economics	
IIS Alumni Network	Recommended by an alumnus of Tsinghua Institute for Interdisciplinary Information Research	Medium
FAI-Seminar Speaker Network	Contacted through the 80+ invited speakers	Medium

Associated Network

Character	Relationship Type	Influence	Remarks
Yuan Yang	Doctoral Supervisor	★★★★★	Assistant Professor at Tsinghua Institute for Interdisciplinary Information Technology, Forbes 30 Under 30, Core Endorser
Andrew Chi-Chih Yao	Academic Collaboration / Mentorship Team	★★★★★★	Turing Award winner, co-authored paper at NeurIPS 2023
Yoshua Bengio	Academic Cooperation	★★★★★★	Turing Award winner, ICLR 2023 co-authored paper
Lu Pinyan	colleague from the same school	★★★★★	Dean of the School of Computer Science and Artificial Intelligence at Shanghai University of Finance and Economics, Theoretical Computer Scientist

Jingzhao Zhang	Academic Cooperation	☆☆☆	Tsinghua Assistant Professor, Optimization Theory
Dinghuai Zhang	Academic Cooperation	☆☆☆	Mila/Montreal, Bengio Team
Feng Xingdong	colleague from the same school	☆☆☆	Dean of the School of Statistics and Management at Shanghai University of Finance and Economics

Comprehensive Assessment

Core Advantages

- 1. **Top-tier Academic Network:** During his Ph.D., he co-authored papers with two Turing Award laureates (Yao Qizhi and Bengio), and visited Princeton to study under Sanjeev Arora, which is extremely rare among scholars of the same age
- 2. **Precise research directions:** Transformer theory, LLM self-improvement, and Scaling Law boundaries - precisely the directions where theoretical breakthroughs are most needed in the current AI industry
- 3. **Extremely high output density:** 7 top conference papers (ICML×3, ICLR×2, NeurIPS×1, AISTATS×1) during a 4-year PhD, and the output pace has not slowed down after becoming independent
- 4. **Strong community operation capabilities:** Founded FAI-Seminar and continuously operated it for 4 years (2022 to present), with over 200,000 views on Bilibili, established the core node of the Chinese ML theory community, and the organizer network spans top global institutions
- 5. **Interdisciplinary Perspective:** Undergraduate background in finance and economics + doctoral degree in AI theory, discussing Scaling Law by analogy with economics at the Pujiang Annual Conference, with a unique way of thinking
- 6. **Shanghai local:** Easy to reach and long-term follow-up

Core Risk

1. **No direct entrepreneurial intention signal** : Typical academic path (undergraduate → doctoral → assistant professor), no monetization attempt
2. **Weak personal brand operation**: No Twitter/LinkedIn/GitHub, and personal social influence is mainly indirectly reflected through FAI-Seminar
3. **Early career stage**: Just started work in 2024, and unlikely to leave academia in the short term under tenure pressure
4. **Pure theoretical background** : The research focuses on theoretical proof, and the ability to implement in engineering is unknown

Issues recommended for offline verification

1. Do you have any ideas about monetizing conformal prediction/generalization theory?
2. What is your attitude towards AI entrepreneurship? Have you considered the path of combining industry, academia, and research?
3. Have you led student teams at SUFE? What is the size and direction of the team?
4. Has there been any collaboration with Lu Pinyan (Dean of the School of Computer Science and AI at Shanghai University of Finance and Economics)?
5. Is it possible that research on the theoretical boundaries of Scaling Law could yield monetizable tools/methods?

Supplementary Information (Updated after Comparison of v2 Reports)

Key incremental information borrowed from the v2 report

1. **Correction of the number of papers:** The v2 report, based on the complete list on the personal homepage, confirms **13 papers (11 top conferences)**, which is more than the 7 papers in my initial count by:

- ICLR 2026: Theoretical Modeling of LLM Self-Improvement Training Dynamics (**通讯作者**)
- NeurIPS 2025: Accelerating Feature Conformal Prediction via Taylor Approximation
- ICLR 2023: Benign Overfitting in Classification (co-authored with Wen Kaiyue)
- ICLR 2022: Towards Understanding Generalization via Decomposing Excess Risk Dynamics
- AISTATS 2022: Can Pretext-Based Self-Supervised Learning Be Boosted by Downstream Data?

2. **FAIC 2026 Offline Conference:** FAI-Seminar has been upgraded to an offline academic conference

- Time: April 18-19, 2026
- Location: Shanghai University of Finance and Economics
- Scale: Over 400 people attended offline
- Significance: From online seminars to offline conferences with 400 participants, organizational capabilities have been significantly upgraded

3. **FAI-Seminar Scale Revision:**

- Actually, there were over 80 occurrences (not "weekly" as I initially estimated), with a cumulative view count of over 380,000 (not 200,000)
- Founding Time: February 2023 (Bilibili Promotion Video, February 11, 2023)
- Cooperation Platforms: AI TIME Community, Jiangmen TechBeat

4. **Honor Supplement:**

- 2025: CCF Outstanding Doctoral Dissertation Incentive Program in Theoretical Computer Science (Nomination)
- 2024: Outstanding Graduate of Tsinghua University
- 2024: Outstanding Doctoral Dissertation of Tsinghua University
- 2023: Tsinghua University Wang Dazhong Scholarship
- 2022: Tsinghua University National Scholarship

5. **Academic Service Supplement:**

- Workshop Organizer: BGPT @ ICLR 2024 ("Bridging the Gap Between Practice and Theory in Deep Learning")
- Top Reviewer: NeurIPS 2022, NeurIPS 2025
- Reviewer: ICML, NeurIPS, ICLR, AISTATS, T-PAMI

6. **Supplementary Information on Reach Methods :**

- WeChat: adoutengjiaye (publicly available in Bilibili videos)
- Twitter: @JiayeTeng
- Bilibili Personal Account: @Teng Jiaye (Single Promotion Video with 245,000 Views)

7. **Other Community Contributions:**

- Release of the Chinese manual <Theory Machine Learning: A Manual of Theoretical Machine Learning for Everyone>
- Actively recruit doctoral students and remote visiting students

8. **Public Event Supplement:**

- AI TIME Roundtable Discussion on Deep Learning Theory (October 2022, with Zhang Bohang from Peking University, Ma Jianhao from UMich, etc.)
- DeepSeek Technical Roadmap Discussion (AI TIME Debate, February 2025)
- ICLR 2022 Speaker (AI TIME Series)

9. **Google Scholar ID Correction:** In the v2 report, it is NGqfK2wAAAAJ (different from m2xyFk4AAAAJ I found, need to verify which one is correct)

Investigation Limitations

1. **Full text of personal homepage could not be crawled:** The web-reader tool has reached its usage limit and failed to obtain the complete content of tengjiaye.com (the v2 report has supplemented the complete list of papers)
2. **Google Scholar citation count not obtained:** Offline access is required to confirm the h-index and total citation count (two possible Scholar IDs exist)
3. **Twitter @JiayeTeng Activity :** The v2 report mentions its existence but does not confirm specific details
4. **FAIC 2026 Detailed Agenda and Participant List:** Not Obtained
5. **Size and Activity of the FAI-Seminar WeChat Group:** Unable to enter the group for investigation
6. **Specific time period for Princeton visit:** Not confirmed
7. **Zhihu paid consultation content:** Zhihu shows "1 consultation", and the specific content is unknown
8. **Undergraduate Specific Major:** Presumed to be Mathematics and Applied Mathematics (participated in the Mathematical Modeling Competition in 2018), confirmed by supervisor Professor Bai Yang (from personal homepage)

v0

Basic Information

- **Current Position:** Tenure-track Assistant Professor, School of Statistics and Management / School of Data Science, Shanghai University of Finance and Economics
- **Educational Background:** Ph.D. from Institute for Interdisciplinary Information Sciences (IIIS), Tsinghua University (Supervisor: Professor Yuan Yang); Visiting Student at Princeton University (Supervisor: Professor Sanjeev Arora); Undergraduate from Shanghai University of Finance and Economics (Supervisor: Professor Bai Yang)
- **Location:** Shanghai
- **Contact Information** (Public Information):
 - 邮箱: [tengjiaye \[at\] suufe.edu.cn](mailto:tengjiaye@suufe.edu.cn)
 - WeChat: adoutengjiaye (publicly available in Bilibili videos)

- Twitter: @JiayeTeng
 - Zhihu: teng-jia-ye-39
 - Bilibili: @Teng Jiaye / @FAI-Seminar
- **Personal Homepage:** <https://www.tengjiaye.com/>
- **Google Scholar:** <https://scholar.google.com/citations?user=NGqfK2wAAAAJ>

Important Note

Teng Jiaye is currently an academic researcher, with no company registration records or entrepreneurial experience found. However, he founded and operated FAI-Seminar (over 80 online academic reports, with over 380,000 views), and developed it into the FAIC 2026 Artificial Intelligence Foundation Conference (with over 400 offline attendees), demonstrating significant community organizing ability and academic influence. The following report serves as a reference for the deal team to evaluate his background as a potential technology founder.

Career Trajectory

Time	Organization	Position	Key Information
2024 to present	School of Statistics and Management / School of Data Science, Shanghai University of Finance and Economics	Tenure-track Assistant Professor	Research Areas: generalization theory, machine learning, statistics
During the visit	Department of Computer Science, Princeton University	Visiting Student	Mentor: Sanjeev Arora (Professor at Princeton CS, AAAI Fellow, pioneer in deep learning theory)
2020-2024	Institute for Interdisciplinary Information Sciences (IIIS), Tsinghua University	Doctoral student	Mentor: Professor Yuan Yang; IIIS was founded by Academician Yao Qizhi, a Turing Award laureate

2016-2020 (approx.)	Shanghai University of Finance and Economics	Undergraduate	Supervisor: Professor Bai Yang
---------------------	--	---------------	--------------------------------

Academic ability

Paper Output (13 papers, Source: Complete list on personal homepage)

序号	论文标题	会议/期刊	年份	
1	Theoretical Modeling of LLM Self-Improvement Training Dynamics Through Solver-Verifier Gap	ICLR 2026	2026	通讯作
2	Accelerating Feature Conformal Prediction via Taylor Approximation	NeurIPS 2025	2025	
3	Minimax Optimal Two-Stage Algorithm For Moment Estimation Under Covariate Shift	ICLR 2025	2025	通讯作
4	Lower Generalization Bounds for GD and SGD in Smooth Stochastic Convex Optimization	AISTATS 2025	2025	与张景
5	When do Models Generalize? A Perspective from Data-Algorithm Compatibility	NeurIPS 2023	2023	与袁洋
6	Finding Generalization Measures by Contrasting Signal and Noise	ICML 2023	2023	
7	On Uni-Modal Feature Learning in Supervised Multi-Modal Learning	ICML 2023	2023	
8	Predictive Inference with Feature Conformal Prediction	ICLR 2023	2023	与 Yos
9	Benign Overfitting in Classification: Provably Counter Label Noise with Larger Models	ICLR 2023	2023	与温凯
10	Fighting Fire with Fire: Avoiding DNN Shortcuts through Priming	ICML 2022	2022	
11	Towards Understanding Generalization via Decomposing Excess Risk Dynamics	ICLR 2022	2022	
12	Can Pretext-Based Self-Supervised Learning Be Boosted by Downstream Data?	AISTATS 2022	2022	
13	T-SCI: A Two-Stage Conformal Inference Algorithm with Guaranteed Coverage for Cox-MLP	ICML 2021	2021	博一即

Top Conference Statistics: ICLR ×4, ICML ×3, NeurIPS ×2, AISTATS ×2 = **11 top conference papers** (2 additional papers submitted/pending confirmation)

Corresponding author: ICLR 2026, ICLR 2025 (has started independently mentoring students)

Collaborator Highlights : Yoshua Bengio (Turing Award winner), Yao Qizhi (Turing Award winner), Sanjeev Arora

Evolution of Research Directions

- **2021-2022:** Conformal inference + generalization theory foundation → theoretical foundation period
- **2023:** Generalization Metrics, Signal-Noise Separation, MultiModal Machine Learning, Benign Overfitting → Expanded to Multiple Sub-Directions
- **2024-2025:** Distribution Shift, Conformal Prediction Acceleration, SGD Lower Bound → Deepening Toolbox
- **2025-2026:** LLM Self-Improvement Training Dynamics (Solver-Verifier Gap) → **Begin research on large models!**

Key Signal: The research direction has shifted from pure theory to LLM training dynamics, and is moving closer to practical issues related to large models.

Collaborative Researcher Network

frequent collaborator	Organization	Collaborative Paper
Yuan Yang (Yang Yuan)	Tsinghua IIIS (Ph.D. Supervisor)	5 articles
Zhang Jingzhao (Jingzhao Zhang)	Tsinghua IIIS	2 articles
Wen Kaiyue (Kaiyue Wen)	Tsinghua	1 Article + Multiple FAI-Seminar Speakers
Lv Kaifeng (Kaifeng Lyu)	Tsinghua IIIS → Princeton Ph.D.	FAI-Seminar Speaker

Yoshua Bengio	Mila / UdeM (Turing Award Winner)	1 article
---------------	-----------------------------------	-----------

Academic Services

- **Workshop Organizer:** BGPT @ ICLR 2024 ("Bridging the Gap Between Practice and Theory in Deep Learning")
- **Seminar Organizer:** FAI-Seminar (International Seminar on Foundations of Artificial Intelligence); FODS (Foundations Of Data Science)
- **Reviewer:** ICML, NeurIPS, ICLR, AISTATS, T-PAMI
- **Top Reviewer:** NeurIPS 2022, NeurIPS 2025

Honor

- 2025: CCF Outstanding Doctoral Dissertation Incentive Program in Theoretical Computer Science (Nomination)
- 2024: Outstanding Graduate of Tsinghua University
- 2024: Outstanding Doctoral Dissertation of Tsinghua University
- 2023: Tsinghua University Wang Dazhong Scholarship
- 2022: Tsinghua University National Scholarship

Entrepreneurial History

No company registration records or business startup experience were found. However, their "quasi-entrepreneurial" behavior is very prominent:

FAI-Seminar (Founder + Operator)

- **全称:** International Seminar on Foundational Artificial Intelligence

- **Official Website:** <https://www.fai-seminar.ac.cn/>
- **Founding Time:** February 2023 (Bilibili Promotion Video 2023.02.11)
- **Scale:** Hosted **80+** online academic lectures within 3 years, with a cumulative **playback volume of 380,000+**
- **Frequency :** 10:00-11:00 AM every Friday (Beijing Time)
- **Speaker Sources:** Top institutions such as Tsinghua, Peking, MIT, Princeton, CMU, DeepMind, UCB, UMich, NYU, HKU, USTC, RUC, etc.
- **WeChat Official Account:** Artificial Intelligence Basic Research
- **Bilibili Account :** @FAI-Seminar
- **Cooperation Platform:** AI TIME Community, Jiangmen TechBeat
- **Still in continuous operation in 2026**

FAIC 2026 Artificial Intelligence Foundation Conference (Founder)

- **Time:** April 18-19, 2026
- **Location:** Shanghai University of Finance and Economics
- **Scale:** **400+ people** attending offline
- **Significance:** Upgrading from an online seminar to an offline academic conference indicates a further upgrade in organizational capabilities
- **Media Evaluation:** "While continuously enhancing model capabilities, artificial intelligence research is delving deeper into exploration around mechanisms, efficiency, robustness, and long-term innovation."

Other Community Contributions

- Release of the Chinese manual <Theory Machine Learning: A Manual of Theoretical Machine Learning for Everyone>
- Actively recruit doctoral students and remote visiting students

Social Media & Public Influence

Platform	Account	Fans / Data	Activity
Bilibili Personal	@Teng Jiaye	245,000 views (single Promotion Video)	Medium

Public Event:

- AI TIME Deep Learning Theory Roundtable Discussion (October 2022, with Zhang Bohang from Peking University, Ma Jianhao from UMich, etc.)
- ICML 2021 Paper Interpretation LIVE (AI Drive, July 2021)
- ICLR 2022 Speakers (AI TIME Series)
- Organizers of the FAIC 2026 Conference
- DeepSeek Technical Route Discussion (AI TIME Debate, February 2025)

Cross-validation of co-founders

Not applicable (currently an individual academic researcher).

Public Evaluation and Public Opinion

Positive Signal

- Ph.D. from Tsinghua IIS, under the guidance of Professor Yuan Yang, with solid academic training
- Published in ICML 2021 during the first year of Ph.D., and published a total of 13 papers (11 top conferences) during the Ph.D. program
- Published an ICLR 2023 paper in collaboration with Yoshua Bengio

- Received the nomination for the CCF Doctoral Dissertation Incentive Program (only a few people nationwide receive this honor)
- Invited to visit Princeton's Sanjeev Arora Group (one of the most influential scholars in the global ML theory field)
- FAI-Seminar has over 80 reports, more than 380,000 views, and is widely recognized
- NeurIPS Top Reviewer (2022, 2025)

Negative Signals / Controversies

- No disputes, legal issues, or negative reviews were found

Red Flag Detection

Concerns (non-fatal):

1. **Completely blank commercial experience:** No work experience, internship experience, or record of participation in commercial projects in the industry. Transitioning from pure academia to entrepreneurship, monetization ability is the greatest uncertainty.
2. **Research direction leans towards theory:** Core capabilities lie in generalization theory and statistical inference, with a distance from productization. However, starting from 2025-2026, research on LLM training dynamics has begun, and it is moving closer to application.
3. **Tenure-track Constraints:** If planning to start a business, it is necessary to confirm whether communication with the school regarding resignation/furlough arrangements has been completed.
4. **Community operation $\neq$ Business operation:** FAI-Seminar is completely free, with no attempt to create a commercial closed loop.

Entrepreneurial Spirit Assessment

Strong Signal:

- **Proactively Building Community (Core Highlights):** Founded FAI-Seminar in 2023, building from scratch the most active online seminar on AI basic theory in China, inviting over 80 world-class speakers, with a cumulative viewership of 380,000, and ultimately evolving into the FAIC 2026 offline conference (400+ attendees). This is not an "academic obligation" but an additional initiative proactively chosen, and it has been continuously operating for 3 years and remains active.
- **Upgrade Ability:** From online seminars to offline conferences for 400 people, demonstrating the ability to upgrade small-scale projects into large-scale events.
- **Influence Pursuit :** Actively creating a Promotion Video on Bilibili (245,000 views), operating a WeChat official account, with a clear desire to "be seen".
- **Top-tier academic connections:** Through FAI-Seminar, he has built a network of top researchers spanning Tsinghua University, Peking University, MIT, Princeton University, CMU, and DeepMind—all these speakers were personally invited by him.
- **Risk Preference :** Jumping from an undergraduate degree at Shanghai University of Finance and Economics to pursuing a doctoral degree at Tsinghua IIIS (a more challenging path), and visiting Princeton (stepping out of one's comfort zone).
- **Sustained Execution :** 3 years of uninterrupted operation of a weekly seminar, extremely long-lasting.

Uncertain Signal:

- There is no record of commercial monetization - FAI-Seminar is completely free
- Community operation vs. business operation are different capabilities - the former is influence-driven, while the latter requires products and revenue
- Publishing a Chinese theoretical manual demonstrates enthusiasm for knowledge dissemination, but no attempt at knowledge monetization has been observed yet

Investment Potential Assessment

Track Match Degree: High

Technical capabilities stack is highly aligned with the core requirements of the AI industry in 2026:

Technical Competence	corresponding track
Generalization Theory	Model reliability assessment, OOD detection

| Conformal Prediction | **AI Safety Verification, Uncertainty Quantification** (One of the Hottest Current Directions) |

| LLM Training Dynamics (Solver-Verifier Gap) | **Large Model Self-Improvement, RLHF Alternatives** |

| Statistical Inference | Data Quality Assessment, Data Screening |

The most suitable monetization path : AI model reliability/security assessment tools (entrepreneurial direction on the same track as companies like Wenbo), or large model training optimization.

Timing signal: requires offline verification

- Tenure-track assistant professors typically face tenure review pressure in their 3rd - 5th year. Starting in 2024, they are now approximately in their 2nd year and may be in the window period of considering their future.
- From 2025 to 2026, the research direction of the paper will shift to LLM training dynamics, which may be preparation for the shift towards application/entrepreneurship.
- It is necessary to confirm offline whether they have entrepreneurial intentions.

Accessibility: High

Multiple direct reach channels are available.

Comprehensive Assessment

Teng Jiaye is a **Machine Learning theory researcher from Tsinghua IIIS and a former visitor at Princeton** , and also the founder and 3-year continuous operator of FAI-Seminar, which he upgraded to the FAIC 2026 offline conference (400+ attendees). His profile is much richer than that of a "pure academic researcher":

Core Advantages

- 1. Top-tier academic background:** IIIS Ph.D. + Princeton visiting + 13 papers (11 top conferences) + CCF Ph.D. Thesis Nomination
- 2. Strong community organizing ability:** 80+ FAI-Seminars, 380,000+ views → FAIC 2026 offline conference with 400+ attendees, from 0 to 1 and then to scale
- 3. Academic connections spanning top global AI labs:** Over 80 speakers from MIT/Princeton/CMU/DeepMind, etc.
- 4. Research directions are moving closer to large models:** From 2025 to 2026, in the direction of LLM training dynamics, conformal prediction happens to be the core technology in the AI safety track

5. **High accessibility:** Direct access is available via WeChat/email/FAI community

Core Risk

1. **Completely blank in business experience:** no industry experience, and FAI-Seminar also lacks a business closed-loop
2. **Research direction leans towards theory:** Generalization theory/statistical inference is far from productization, and suitable partners need to be found to supplement engineering/product capabilities
3. **Constraints of tenure-track positions:** Are you willing to give up a stable academic position?
4. **Community operation $\neq$ Company operation:** Influence-driven vs Revenue-driven are two completely different capabilities

It is recommended to conduct offline verification

1. **Directly confirm whether they have entrepreneurial intentions**— currently only seeing continuous upgrading of academic activities, with no signs of monetization
2. **Understand the operational details of FAI-Seminar**— Is it an individual project or a team effort? How much time is invested in operations? Are there any co-organizers?
3. **Confirm the terms of the tenure-track contract**— Is part-time entrepreneurship allowed? What is the window period for leaving?
4. **Understand its academic reputation and personal evaluation through the IIIS alumni network**
5. **Explore the specific directions of its LLM training dynamics research**—Is there a clear monetization concept?
6. **Assess whether it is necessary to match with business partners** - If you have an intention to start a business, finding suitable engineering/business partners is crucial

Investigation Limitations

1. Google Scholar citation count and h-index could not be accurately obtained (web-reader quota exhausted)
2. Specific content and activity of the Twitter account were not found
3. The detailed agenda and attendee list for FAIC 2026 were not obtained

4. The specific undergraduate major and graduation year were not found (only known to be an undergraduate from Shanghai University of Finance and Economics, with supervisor Professor Bai Yang)
5. The exact year of their doctoral graduation has not been confirmed (estimated to be around 2024 based on the paper timeline)
6. Failed to search for the complete records of their participation in academic forums and conference speeches
7. Failed to join the FAI-Seminar WeChat group to understand the group's activity level and member composition
8. The specific time period for the Princeton visit has not been confirmed
